In today's world, time is money. And as a result, time management skills are more important than ever. In Scrum: The Art of Doing Twice the Work in Half the Time, author Jeff Sutherland breaks down his "scrum" methodology for getting things done with a fraction of the resources and in less time than it would take to complete them on a traditional project plan. At its core is a simple but radical idea: Stop thinking about making one thing--a feature or product--perfect before starting on the next thing! Instead try this revolutionary way to work from now on. Your team will be more productive, you'll have a more realistic plan, and you'll work in a way that feels natural. In fact, you'll end up with twice the results in half the time--and everyone will embrace this highly creative approach. The result of this process is a far more efficient software development environment in which many organizations can successfully leverage agile methods to achieve their goals with the same or smaller staffs.
